

HERBOX

THE COOL PACKAGING FOR HERBS

Herbs are delicate and sensitive. They require special conditions and like all of us, would prefer business class conditions when traveling aboard. This is why at **CARGOLITE®** we developed **HERBOX**, the cool and innovative packaging for herbs.

In the **HERBOX 1kg**, the top of the 1 Kg package is allocated to the leaves whereas the bottom part of the package is reserved for the stems.

The stems, unlike the leaves, can be compressed without causing any damage to the bunches.

- ***So we created HERBOX, a packaging with a bottom half that can be compressed while leaving the top half intact.***

By doing so, we obtained a box with a trapeze-shaped bottom. When the boxes are placed one next to another, triangular spaces are formed between them. Through these spaces, cold air circulates and reaches all the boxes on the pallet.

- ***HERBOX assures an even distribution of cold air to each and every box on the pallet and keeps the herbs in optimal condition***

- ***With this improved cooling, it is now possible to reduce the volumetric weight of the boxes of 1 kg of basil mint and other herbs without causing an increase of temperature inside the box and compromising their quality!***

PERFECT BUNDLES OF 10 AND 12 BOXES

Commonly, bundles of several boxes are often made with improvised parts of carton or simply consist of a large box (master) compactly containing the desired quantity of boxes. In most of the cases, the problem of heating worsens and the quality, both of the packaging and the product, is compromised.

- ***HERBOX uses its own dedicated master carton to bundle 10 or 12 boxes which allow a uniform circulation of cold air through the triangular air channels between the boxes.***

- ***The master carton protects the boxes and their contents from physical damage and mishandling during the transit process and pallet building.***

2 master cartons are available for the 1 kg boxes:

MASTER 10 - to bundle 10 "big" boxes, a 10 Kg bundle

MASTER 12 - to bundle 12 "small" boxes, a 12 kg bundle

- ***The master cartons can be cut for bundling 2, 4, 6, 8 or 10 boxes and retain their functionality and characteristics.***

EASY PALLET BUILDING

With the **HERBOX**, building a skid or a full air pallet is fast and easy. The bundles have optimized dimensions to fit 100 x120 cm skids and can be combined easily into a mixed pallet of different types of boxes and herbs.

- ***With the HERBOX system, air pallets have a uniform, stable and reliable structure.***

HERBOX 6

Based on the same principle of airways, **HERBOX 6** is designed to pack 6 kg of herbs in one box using 6 separate standard bags of 1 kg.

The air vents go through from side to side and let cold air flow to reach each bag inside each box.

The air vents allow for packing 6 kgs in a smaller volume than 6 regular 1 kg boxes. This makes HERBOX6 ideal for airfreight based on volumetric weight

The air vents can be either opened or closed, according to the environing conditions in which the box is stored during travel.

EASY PALLET BUILDING

With **HERBOX 6**, building a skid or a full air pallet is fast and easy. The bundles have optimized dimensions to fit 100 x120 cm skids and can be combined easily into a mixed air pallet of different types of boxes and herbs.

- ***With the HERBOX system, skids and air pallets have a uniform, stable and reliable structure.***

PERFECT BUNDLES OF HERBOX 6

Four **HERBOX 6** boxes can be bundled into one **MASTER 6** that conserves the option for opening or closing the airways and allows for safer travel and skid building

- ***The MASTER 6 is perfect for shipping loose bundles in passenger planes.***
- ***The master carton protects the boxes and their contents from physical damage and mishandling during the transit process and pallet building.***

HERBOX 1kg is available in 2 different options:

195x195x220H (1 kg)
equivalent to the common Upright "BIG" Box

195x165x220H (1 kg)
equivalent to the common Upright "SMALL" box

395x495x220H (6 kg)
HERBOX 6 for packing 6 individual bags of 1 kg in one box
